

Diabetic Eye Exam

Diabetes is a disease in which blood glucose levels are above normal. The condition often poses other health risks, such as eye disease and vision impairment.

Things to know:

- Diabetics are at increased risk of eye disease that can lead to severe vision loss or blindness.
- Diabetic retinopathy is the most common cause of vision loss among diabetics.
- Diabetics should see an eye care professional at least once a year.

If you have diabetes or an eye disease resulting from diabetes, you may need eye exams more frequently. Early detection and treatment can reduce the risk of blindness.
