

Breast Cancer Screening

Here are a few reasons why you should consider getting a mammogram:

- Breast cancer is the 2nd most common cancer in U.S. women after skin cancer.
- Screening mammography increases breast cancer survival rates for women ages 40-74.
- Early detection gives women new options for breast conserving therapy.

3D mammography:

- Detects more breast cancers than standard mammography.
- Minimizes your need of repeat mammograms due to false positives.
- Designed especially for those with dense breast tissue so abnormal growths are more visible.
