

MitraClip® Patient Checklist

Once you have been referred to the MitraClip® team, you will have a thorough cardiac evaluation. MitraClip® is indicated for patients with severe, symptomatic, degenerative mitral regurgitation who are at high risk for mitral valve surgery (open heart surgery). This process is to ensure that you are a good candidate for the MitraClip® procedure.

- ☐ MitraClip® cardiologist
- ☐ Transesophageal echocardiogram (TEE)
- ☐ Cardiovascular surgeon
- ☐ Pulmonary function tests (PFTs)
- ☐ 6-minute walk test
- ☐ MitraClip® coordinator

Additional testing may be necessary. We will inform you of any other testing required. Once your evaluation is completed, our team will review your case. If you are a good candidate for MitraClip®, we will schedule your procedure as soon as possible.
